```
marks=[]

for i in range (5):
  m=int(input("Enter a Marks: "))
  marks.append(m)

print(marks)
```

```
Enter a Marks20
Enter a Marks32
Enter a Marks56
Enter a Marks46
Enter a Marks55
[20, 32, 56, 46, 55]
```

Riya Kathe
11:37 AM Today

Write a program to store 5 student marks in a list and display them.

```
marks=[]

for i in range (5):
  m=int(input("Enter a Marks: "))
  marks.append(m)

print(marks)

largest=max(marks)
print("largest Number = ",largest)
```

```
Enter a Marks: 45
Enter a Marks: 54
Enter a Marks: 87
Enter a Marks: 41
Enter a Marks: 56
[45, 54, 87, 41, 56]
largest Number =  87
```

Riya Kathe
11:38 AM Today

Write a program to find the largest number in a list.

```
Stud_roll=[]
for i in range (5):
  s=int(input("Enter a Student Roll no : "))
  Stud_roll.append(s)

print(Stud_roll)

element=int(input("Enetr an element you want to check how many times that element

print("Element : ",element ," are appear  " ,Stud_roll.count(element),"times")
```

```
Enter a Student Roll no : 4
Enter a Student Roll no : 5
Enter a Student Roll no : 5
Enter a Student Roll no : 5
Enter a Student Roll no : 8
[4, 5, 5, 5, 8]
Enetr an element you want to check how many times that element are appear 5
Element :  5  are appear   3 times
```

Riya Kathe
11:41 AM Today

3. Write a program to count how many times a particular element appears in a list.

```
marks=[10,20,30,40]
marks.append(7)
print(marks)
marks.remove(20)
print(marks)
```

```
[10, 20, 30, 40, 7]
[10, 30, 40, 7]
```

Riya Kathe
11:51 AM Today

4. Write a program to add a new element to a list and remove an existing element.

```
marks=[]

for i in range (5):
  m=int(input("Enter an all subject Marks: "))
  marks.append(m)

print(marks)

total=sum(marks)

print("total of all subject marks : ",total)
```

```
Enter an all subject Marks: 12
Enter an all subject Marks: 56
Enter an all subject Marks: 89
Enter an all subject Marks: 78
Enter an all subject Marks: 25
```

Riya Kathe
11:55 AM Today

5. Write a program to calculate the sum of all elements in a list.

```
[12, 56, 89, 78, 25]
total of all subject marks :  260
```

```
num = (10,56,36,58,14)
print("Second element of Tuple",num[1])
```

```
Second element of Tuple 56
```

Riya Kathe
11:58 AM Today

6. Write a program to create a tuple of 5 numbers and display the second element.

```
numbers = (10, 20, 30, 40, 50)
element = 30

if element in numbers:
    print(element, "exists in the tuple")
else:
    print(element, "does not exist in the tuple")
```

```
30 exists in the tuple
```

Riya Kathe
12:04 PM Today

7. Write a program to check whether an element exists in a tuple.

```
numbers = (10, 20, 30, 40, 50)

num_list = list(numbers)

print("Tuple:", numbers)
print("List:", num_list)
```

```
Tuple: (10, 20, 30, 40, 50)
List: [10, 20, 30, 40, 50]
```

```
My_tup=(10,20,30,30)
lenght=len(My_tup)
print("Lenght of Tuple : ",lenght)
```

```
Lenght of Tuple :  4
```

Riya Kathe
1:18 PM Today

9. Write a program to find the length of a tuple.

```
my_tuple = (1, 2, 3)
print("Original tuple:", my_tuple)

my_tuple[0] = 10   # This will cause an error
```

```
Original tuple: (1, 2, 3)
---------------------------------------------------------------------------
TypeError                                 Traceback (most recent call last)
/tmp/ipython-input-2595327208.py in <cell line: 0>()
      4
      5 # Try to change the first element
----> 6 my_tuple[0] = 10   # This will cause an error

TypeError: 'tuple' object does not support item assignment
```

Riya Kathe
1:21 PM Today

10. Write a program to explain why tuple is immutable with an example.

```
stud_detail={"Name":['Riya','Siya','priya'],
             "age":[20,21,78],
             "City":["Mumbai","Nashik","Pune"]}
print("Student Details : ",stud_detail)
```

```
Student Details :  {'Name': ['Riya', 'Siya', 'priya'], 'age': [20, 21, 78], 'City'
```

Riya Kathe
1:22 PM Today

11. Write a program to store student details using a dictionary and display them.

```
stud={"Name":"Riya Kathe","Age":20}
print(stud)
stud.update({"City":"Pune"})

print(stud)
```

```
{'Name': 'Riya Kathe', 'Age': 20}
{'Name': 'Riya Kathe', 'Age': 20, 'City': 'Pune'}
```

Riya Kathe
1:29 PM Today

13. Write a program to update the value of an existing key in a dictionary.

Riya Kathe
1:29 PM Today

14. Write a program to check whether a key exists in a dictionary.

```
stud_detail={"Name":['Riya','Siya','priya'],
             "age":[20,21,78],
             "City":["Mumbai","Nashik","Pune"]}
print("Student Details : ",stud_detail)

if 'Name'  in stud_detail :
  print("Name key is present in the dictionary")
else :
  print("Name key is not present in the dictionary")
```

```
Student Details :  {'Name': ['Riya', 'Siya', 'priya'], 'age': [20, 21, 78], 'City'
Name key is present in the dictionary
```

Riya Kathe
8:58 PM Today

15. Write a program to print all keys and values of a dictionary.

```
stud = { "Name":"Riya Kathe",
        "Age":21,
         "City":"Location",
         "collage":"DYPatil"}

for key,value in stud.items():
  print(key,":",value)
```

```
Name : Riya Kathe
Age : 21
City : Location
collage : DYPatil
```

Riya Kathe
9:06 PM Today

16. Write a program to create a set with duplicate values and display the output.

```
My_set={10,20,30,30,40,50,50}
print("Remove all duplicates values :" ,My_set)
```

```
Remove all duplicates values : {50, 20, 40, 10, 30}
```

Riya Kathe
9:11 PM Today

17. Write a program to add a new element to a set.

```
My_set={10,20,30,40,50}

print(My_set)
My_set.add(60)
print(My_set)
```

```
{50, 20, 40, 10, 30}
{50, 20, 40, 10, 60, 30}
```

Riya Kathe
9:11 PM Today

18. Write a program to remove an element from a set.

```
My_set={10,20,30,40,50}

print(My_set)
My_set.remove(50)
print(My_set)
```

```
{50, 20, 40, 10, 30}
{20, 40, 10, 30}
```

Riya Kathe
9:14 PM Today

19. Write a program to find the union of two sets.

```
set1={10,30,40,40}
set2={10,30,20,50}
print(set1)
print(set2)
print("Union of two sets : ",set1.union(set2))
```

```
{40, 10, 30}
{10, 20, 50, 30}
Union of two sets :  {50, 20, 40, 10, 30}
```

Riya Kathe
10:06 PM Today

20. Write a program to find the intersection of two sets.

```
set1={10,30,40,40}
set2={10,30,20,50}
print(set1)
print(set2)
print("Union of two sets : ",set1.intersection(set2))
```

```
{40, 10, 30}
{10, 20, 50, 30}
Union of two sets :  {10, 30}
```
